

# Adapting Guideline Implementation to Local Environments (AGILE)

—  
A decision support tool to overcome local barriers to change

For more information contact

Prof. Edmond Ramly, PhD, Family Medicine and Community Health, UW-Madison – Email: [ramly@wisc.edu](mailto:ramly@wisc.edu) – Twitter: [@ramlyed](https://twitter.com/ramlyed)

# Overview

---

- **Why:** To support implementation projects by balancing standardization with the local needs of different sites.
- **Key Message:** Drawing from engineering approaches:
  - One-size-fits-all and to-each-their own are not the only two kinds of solutions for implementation.
  - Configurable solutions give menus of options and let users finish the design to meet their needs.

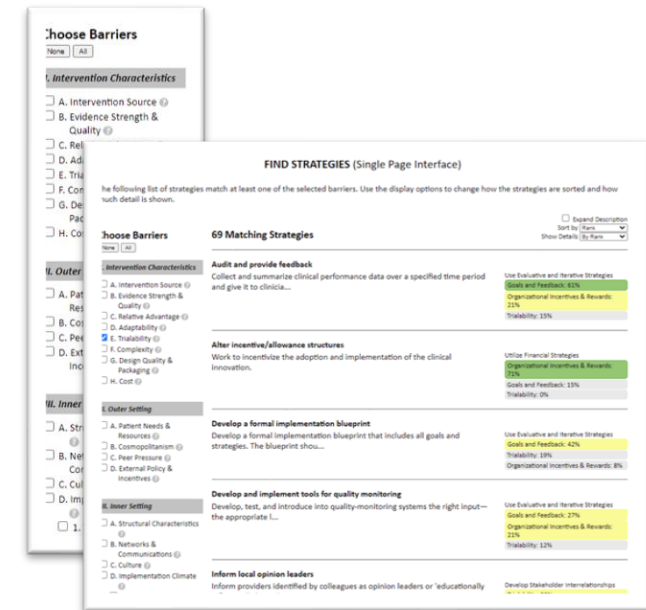

# Details

## Why balance standardization and local needs:

- If change implementation doesn't fit local needs:
  - Lower impact, adoption, and sustainment
  - May increase health equity gap
- Tailoring implementation strategies to fit local needs
  - Helps clinics adopt and sustain change that fits
  - **But** is time-consuming and expensive

## Drawing on configurable solutions used in engineering:

- Provides a mechanism to reduce the time and cost required for tailoring.
- By giving menus of options of barriers linked to matching strategies

# Matching local barriers with helpful strategies

SELECT BARRIER

SUGGESTIONS

CHOOSE STRATEGIES

**Choose Barriers**

None | All

**I. Intervention Characteristics**

- A. Intervention Source
- B. Evidence Strength & Quality
- C. Relative Advantage
- D. Adaptability
- E. Trialability
- F. Complexity
- G. Design Quality & Packaging
- H. Cost

**II. Outer Setting**

- A. Patient Needs & Resources
- B. Cosmopolitanism
- C. Peer Pressure
- D. External Policy & Incentives

**III. Inner Setting**

- A. Structural Characteristics
- B. Networks & Communications
- C. Culture
- D. Implementation Climate
- 1. Tension for Change

Based on the published CFIR-ERIC mapping study (Waltz et al. 2019)

**FIND STRATEGIES (Single Page Interface)**

The following list of strategies match at least one of the selected barriers. Use the display options to change how the strategies are sorted and how much detail is shown.

# Example with PrEP Implementation (from ISCI)

## BARRIERS IN THE INNER SETTING DOMAIN - CIS-GENDER

### WOMEN IN NON-HIV CLINICAL CARE SETTING

Determinant	CFIR construct	Study participants - deliverers
Difficulty of providing consistent training to rotating residents and medical students and newly hired staff	Access to knowledge & inform.	Providers and staff
Lack of institutional clinical guidelines	Available resources	Providers and staff
Staffing and time constraints	Available resources	Providers and staff
Lack of time during patient visits	Available resources	PrEP prescribers
Time required for providers to communicate the importance of adherence	Available resources	HIV specialists or generalists
Time required for providers to counsel PrEP users on sexual risk reduction	Available resources	HIV specialists or generalists
Time required for providers to monitor PrEP use and adherence	Available resources	HIV specialists or generalists
Lack of belief that PrEP education is almost always or always essential in HIV prevention counseling	Compatibility	PrEP prescribers
Importance of addressing the patient's primary reason for the visit (vs. HIV prevention)	Culture	Providers and staff
Lack of sensitivity to the emotional needs of patients seeking abortion	Culture	Providers and staff
Limited woman-centered patient education materials	Culture	Providers and staff
Competing priorities during clinical encounters	Relative priority	Providers and staff
